Abstract (en)

[origin: WO9707276A1] An improved technique of supplying a treating liquid for a cloth treating machine, including a method of preparing the liquid for treating cloth in the cloth treating machine and a cloth treating machine having the function. A cloth treating liquid having a predetermined concentration is prepared by inputting a powder agent for increasing the fluid friction of a solvent into a powder agent inputting/agitating section in a treating liquid circulating system of the cloth treating machine, or by inputting the powder agent into the solvent in a flow path where the solvent has a large fluid friction locally in the circulating system, and by agitating the powder agent exploiting the fluid friction. The prepared cloth treating liquid is circulated in the treating liquid circulating system to rationally treat the cloth.
