Abstract (en)  
[origin: EP0787846A2] A seal for corded material (12) introduced continuously into a closed chamber with a processing atmosphere has, at an opening in the chamber, a connector element (16) with an inlet (26), i.e. flexible tube (20) having a cross-section which can be adjusted by a grasping pressure device (30) with a variable cross-sectional opening. There is also drafting apparatus (18) which draws the cord through the connector inlet. Also claimed are (i) a second similar seal where the compression device is not required; and (ii) an arrangement where several seals are located in one chamber one after the other.
