Abstract (en)  
[origin: EP0787905A2] The distributor has contact surfaces (7,8) as flat ground surfaces between an intermediate plate (2) and a hydraulic block (6). Cylinder-shaped connections (9) extend from the surface (7) of the intermediate plate, each with a sealing ring (22) within a cylindrical drilling (10) in the housing of the hydraulic block (6). The intermediate plate and housing of the hydraulic block are locked together by screw bonds (25), to force the surface of the intermediate plate in a sealed fit against the surface (8) of the hydraulic block.
