Abstract (en)

[origin: WO9613452A1] The device comprises a device (E) to take up the item (S) and prepare it at a despatch position (A), a drum (T) arranged to rotate about its longitudinal axis (LA), in the jacket of which there is at least one extraction aperture and a conveyor (F) to receive the separated item (S) and transport it further, in which the item (S) prepared at the despatch position (A) is secured via the extraction aperture (SO) in the drum (T) and, after a rotation of the drum (T), deposited on the conveyor (F). The device is also suitable for separating and transferring unpacked periodicals and newspapers.
