Abstract (en)  
[origin: EP0788760A2] The vacuum cleaner power-on device (8) includes an electrical load connection (4) and an associated electrical power-on automatic mechanism, which turns on the vacuum cleaner when a device connected to the load connection is turned on. The power-on device is connected to the load connection to operate a device which is not connected to the load connection. The power-on device has a switch element which is operated by the device. When the device is operated the switch element connects the load connection to an electrically simulated load.
