Abstract (en)  
[origin: DE19536116A1] Heat transmission devices are provided for at least a further circuit for feeding a further heat transmission medium. In the unit comprising the collection tubes (2,3) and the rib/tube block (4) two independent heat transmission areas (19,20) are formed. In at least one heat transmission area the heat transmission devices, for one further circuit, are integrated. In both collection tubes at the same height, at least one dividing wall arrangement (10) may be provided for division of each collecting tube into independent heat transmission areas. The dividing wall arrangement may be formed by two closing walls (14,16), between which is an intermediary space (15).
