Abstract (en)

[origin: DE4439746C1] An evaluation apparatus (1, 24) for transmitting a mechanical motion in a system for mutually locking power switches (A, B, C) has a first input slide (4) with a releasable coupling member (10) that drives an output slide (10). Guiding means (3) for a second symmetrically arranged input slide (25) are provided on a support. The evaluation apparatus (1, 2, 4) acts as an exclusive OR element and selectively as an AND or exclusive OR element when the output slide (10) is provided with a roller (26).
