Abstract (en)

[origin: EP0790030A1] The detector incorporates a sensor (19) for the plate-like connection piece (11) of cardboard bonded around the opening of the bag (10) and retained in position against a wall (12) of the cleaner by a hook (15) over its edge and a catch (16) protruding through a hole (17). The sensor has a printed circuit responsive to the reflection of electromagnetic waves from a metallic film or plate (18) applied to a portion of the cardboard. The signal is evaluated to establish the correct placement of the bag before the motor is switched-on.
