Abstract (en)
[origin: EP0790051A2] The container has at least four compartments (2,3,4,5). Each compartment has its own inlet opening (7,8,9,10). An outlet (12) feeds the liquids into the body into the intestines or via any other way. The compartments can be interconnected by valves (13,14,15) which can be opened from the outside. By selectively opening these valves, liquids in the compartments may be completely mixed.
