Abstract (en)

[origin: EP0790083A2] The apparatus includes a feed device which delivers coating material (5) from at least one collection container to a substrate (2). The delivery process is monitored by a measurement device (40). Each container (27,31) has a measurement device with a level indicator fitted with at least two sensors (41,42) which detects the level at all times. The level indicator can be calibrated at any time by the two sensors when they are immersed in liquid or paint. Two collection containers (27,31) are linked together and have two sensors (41,42) connected to a evaluation unit (69).
