Abstract (en)
[origin: EP0790088A2] The machine has two parallel working plates (5e,63e) with a drive system (11e) between them. Each working plate has a number of apertures (19De,19le,65De,65le) in the outer main side surface (105e,74e) facing away from the other working plate. Machining units (9Ue,9Me) can be fitted in these apertures and connected to the drive system (11e). There is at least one intermediate gear train (79c) against the first main side surface (73c) of the working plate (63c), engaged with a gear crown (77c) of the central gear (71c).
