Abstract (en)  
[origin: EP0790133A2] An indentation marking head for creating indented indicia in a workpiece comprises a substantially planar disk which bears around its periphery a plurality of slugs which are appropriately contoured to create the indicia when impressed against the workpiece. The disk has a continuous circumference and is resiliently deformable from its planar configuration to allow a slug to be impressed against a workpiece located next to a principal surface of the disk.
