Abstract (en)
[origin: EP0790168A1] The superstructure consists of side walls (12), top and bottom elements (4, 5) and upper and lower belts (6-9) in the form of hollow strips. The chambers in these strips are bounded by two or three strip walls or are entirely enclosed. The strips have a connection side to the adjacent strips. The connecting sides (13-17) and the longitudinal axes of the strip walls (1a,2a,4a,5a) and of the side walls and top and bottom elements run transversely to the direction of travel. The connecting sides (18-21) and strip walls or the upper and lower belts extend in the direction of travel.
