Abstract (en)

[origin: EP0790190A1] The container comprises a body (1) with a main cavity (1.1) for a first product, and a second cavity (2.1) inside the first, closed by a cap (2). The main cavity is closed by a sealing lid (3). The body is of a thermoplastic material such as polyethylene, polypropylene, or an ethylene-propylene copolymer made by thermal moulding or injection. The secondary cavity incorporates a central projection (2,3) which pushes off its cap when a finger pressure is applied to it from below, enabling the two products to mix. In variants of the design the secondary cavity's cap can be attached to the main lid, or the secondary cavity can be in the form of an additional container attached to the inside of the main lid, with a projection on the base forming its cap.
