Abstract (en)
[origin: EP0790384A1] A retractable closure for a building opening, said closure comprising a flexible sheet (7) having opposite first and second lateral edges and a third edge extending transverse to said first and second lateral edges, a retractor mechanism (15) connected to the third edge, with the flexible sheet (7) being capable of being extended over said building opening to an extended position in opposition to the retractor mechanism, while being retractable to a retracted position by the retractor mechanism, first and second guide tracks (9, 10) positioned to receive said first and second lateral edges respectively for movement therealong, and engagement members (19) secured to at least one of said first and second lateral edges to keep said at least one lateral edge in engagement with the relevant one of said first and second guide tracks. Engagement members are provided which comprise pliable tongues (19) biased to deflect from the flexible sheet (7) in the extended position thereof and to be substantially flush with the flexible sheet in the retracted position thereof. <IMAGE>
