Abstract (en)
[origin: WO9615335A1] The invention concerns a shuttering element (10) for the casing type of concrete construction, said element comprising two opposite side parts (12, 14) interconnected by spacers (16). The spacers comprise at least two parts (18, 20) which can be slid into each other, one part (18) penetrating a side part (12) of the shuttering element and being connected thereto. The respective other part (20) penetrates a second side part (14) and is connected thereto. The two parts of the spacer are interconnected such that they are slid into each other between the two side parts in a tension-resistant manner.
