Abstract (en)
[origin: WO9615595A1] The plug connector is intended for the connection of a small hand-equipment to a connecting device system and comprises a l.f. section designed to transmit several different signals, an r.f. section (7) and a power supply section (3, 4). To reduce the space required for the plug, at least part of the l.f. signal transmission takes place serially and contactlessly via transmission and reception components (5, 6) integrate into the two connector components.
