Abstract (en)  
[origin: EP0791313A1] The supporting rail (5) has at least one runner-web (4) and a vertical fixture-web (9). Cylindrical fixture pins (7) protrude horizontally from the fixture-web on the top sealing-edge (10). The top parts of the pins have teeth (12), the remainder is smooth. When the pins are mounted in the wall, the teeth claw into the side of the receiver boring (8) of the furniture wall (1). Each fixture pin may have at least two teeth which increase in height towards the free ends of the pins.
