Abstract (en)

[origin: EP0791315A1] The support bar (30) is joined to a U-shaped coupling part (10) and sits on the exterior (19) of the outer of the two U-arms in the form of a disc (11). The other, inner U-side (12) and the bridge-piece (13) form a suspension hook (33). The two ends (16,16') of the annular part (12) cooperate with the base (29) of the transverse cut. A holder (20) on the wall (50) has a counter coupling part fitting into the interior of the U-shaped coupling part. The holder consists of a cup-shaped housing (20) with knob (40) inside (21) the cup. The knob is radially spaced apart from the inner surface (26) of the cup-casing (25) by at least part of an annular groove (24). The peripheral surface (27) of the casing has a transverse cut (28).
