Abstract (en)
[origin: EP0791399A1] The applicator has a housing (7) bounded by a movable sealing component (29,46). It has medium chambers which include a pressure chamber (13) and an outlet channel (18) for a medium outlet (19) lying in a discharge axis (51). The outlet channel has sections of which one is bounded by outlet components such as nozzles which form a guide (54) with guide faces for the medium. At least one outlet component forms with the sealing component a one-piece modular unit (11).
