Abstract (en)

[origin: EP0791402A1] The system for coating at least one laminar substrate (10) with a layer of resin comprises: a conveyor (12), at least one table (20) which can be transported by the conveyor (12) and has a bearing surface (28) which can support at least one respective laminar substrate (10), and a station (14) for the application of the resin to the laminar substrate (10) supported by the table (20). The table (20) has an internal cavity (32) which communicates with the bearing surface (28) through a plurality of holes (26) and the system comprises vacuum-generating means (54) and means for selectively connecting the vacuum-generating means to the internal cavity (32) of the table (20) so as to cause the laminar substrate (10) selectively to adhere to the bearing surface (28) of the table (20). <IMAGE>
