Abstract (en)

[origin: EP0791417A1] The die for a continuous casting installation consists of two counter-rotating caterpillar tracks made up of links with shell structures (81, 91) shaped to form jointly a die cavity with a circular cross section (10). The die comprises: (a) shell structures (81, 91) with mating edges (82, 92) which are movable relative to one another perpendicular to the track circulation direction; and (b) guided and loaded track links that successively reduces the cross section (10) within the zone of interaction of the two caterpillar tracks.
