Abstract (en)
[origin: EP0791435A1] The removable handle (14) has a movable, especially rotary fixture element (22) positioned near the handling part of the handle. The fixture element may be a screw in the handle with a manually gripped and operated head (38). The handle can have a cavity opening into its grip surface (26,28) and in which the fixture is manually operated. The fixture may protrude out of the cavity beyond the grip surface. The handle may have an ergonomically shaped knob, whilst a recess (34) may be built as an opening (30,32) from one side of the gripping surface (26,28) to the other.
