Abstract (en)  
[origin: EP0791713A1] At least one hinge part (12) fixed to the swivel door (32) on the frame (30) is joined to a hinge part (14) by a connecting shaft (15). The second hinge part is fixed to the frame supporting the door. At least one hinge part can be adjusted and locked in relation to the other hinge part across the pivot axle (A) of the connecting shaft. The adjustments for the two hinge parts are in the form of eccentric bushes (16,18) containing the connecting shaft and pivot mounted in the hinge parts. Each eccentric bush is held in the hinge part by a threaded connection (19) and has at least one externally accessible longitudinal slit (21) on the end side, into which a screw-driver or similar tool can grip. A threaded bolt (22) is screwed coaxially into the eccentric bush to come into contact with the connecting shaft.
