Abstract (en)

[origin: EP0791854A1] Recesses (10a-c,20a-c) are positioned in the walls (10,20) of two interconnected half-shells (1,2). Two ladder-shaped elements have first conveyor rollers. A central element holds the ladder-shaped elements in position and forms, together with the ladder-shaped element and the wall of the half-shells, a duct for the photographic material to be developed. The central element has second conveyor rollers in contact with the first conveyor elements. It ensures that the photographic material to be developed is guided between the first and second conveyor rollers through the duct.
