Abstract (en)
[origin: DE4440583A1] A loudspeaker-lamp combination has at least one loudspeaker (3) with at least one electroacoustic transducer associated to a sound-radiating reflector body (4), and at least one lamp with a light source. In order to achieve a simple design that uniformly radiates both sound and light, the light source (5) is arranged in the area of the conical reflector body (4) whose outer reflector surface (4a, 4b) reflects and radiates both acoustic waves and light beams over a large surface.
