Abstract (en)
The flashing material consists of a strip of a malleable material, either lead or bitumen-based, folded into a series of transverse pleats (3) and then folded lengthwise to make two sides (1,2) at an angle to one another, linked by a continuous transitional zone (15). The thickness of the strip is between 0.4 and 3 mm, and the height of the pleats is between three and 10 times the thickness. One of the two sides of the folded strip is between 1.5 and 4 times the width of the other.

Abstract (fr)
Le couvre-joint pour toiture, notamment pour couvrir la jonction entre une cheminée et au moins un versant d'un toit au-dessus duquel s'élève la cheminée, est constitué d'une bande en une matière malléable comprenant deux ailes (1,2) et s'étendant côte à côte et formant entre elles un angle (d) de l'ordre de 90°, ces ailes (1,2) présentant une succession de plis (3,3a,3a') suivant la direction longitudinale (12). <IMAGE>
