Abstract (en)
A door lock has a latch, key-bolt and other usual mechanisms, which are operated from the inside and the outside of a door via a pusher and a cam. The lock is comprised of modular sub-assemblies of a lock-casing (4), complete key-bolt (5,60), complete latch (26) and an interchangeable lock cylinder. The key-bolt and latch assemblies are located into mounting bores in the lock-casing and cover via formed-on distance plates (11,12,13,14,15,24). These distance plates are located either on a key-bolt plate (41,64) or on the baseplate (33) for the latch.

Abstract (de)
Die Erfindung betrifft ein Schloß, welches einen modularen Aufbau aufweist. Der modulare Aufbau zeichnet sich dadurch aus, daß innerhalb eines Schloßkastens ein komplett montiertes Riegelpaket und ein komplett montiertes Fallenpaket eingesetzt wird. Darüber hinaus läßt das Riegelpaket sämtliche auf dem Markt befindlichen Schließarten zu. <IMAGE>
