Abstract (en)

[origin: EP0793054A2] The shutter device for use in the headlight comprises an element (2) which is intended to encase the front part of the lamp of the headlight. It includes a front surface (24), and lower and upper panels (21,20) as well as side panels (22,23) and an aperture at the rear (25) to engage the lamp. At least one of the lateral walls (22,23) includes ventilation slots (5,6) projecting from the walls and directed outwards and upwards. The device may be made from a sheet of material which has been cut to shape, with the slots also cut, and then folded to the required box-like shape to encase the front part of the lamp.
