Abstract (en)

[origin: EP0793211A2] The securing paper is of the type used for banknotes with banknote-type impression and takes the form of a sticker. The sticker is divided by intended break lines so that on removal it is damaged. There is a cavity in which the sticker is adhered, situated on the outer surface of the product. The sticker is covered by a light or radiation-permeable mass. It is printed with at least one colour which becomes fluorescent under the effect of ultra-violet light. It incorporates a printing which represents a holographic, three-dimensional picture, as is customary e.g. with credit cards or cheque cards.
