Abstract (en)

[origin: WO9616577A1] A device for storing and controllably dispensing small objects, including a housing (1) and a series of cells (12) receiving at least one object each. The device is characterised in that the cells (12) are arranged on a rotary drum (3) and include at least one access opening on one of the bases of the drum (3), the openings being arranged in a series of rows. Said device comprises means for controlling and indexing the drum (3) to place it in respective positions so that each row of openings can be positioned along a predetermined fixed radius relative to the housing (1), and means for addressing and accessing each opening in the row positioned along said predetermined fixed radius.
