Abstract (en)

[origin: GB2295445A] The steering shaft (1) is mounted within a column tube (2); a bracket (3) having bracket members (4, 5) secures the tube to a vehicle; adjustment between tube and bracket is provided by slots (16, 17 and 36, 37) preferably in antifriction elements (12, 13 and 38, 39); a clamping arrangement (20, 21, 24) is provided which has a central clamping axis (A) which intersects at (C) the steering shaft axis (B) so that the clamping force to secure the tube (2) relative to the bracket (3) acts through the intersection at (C) resulting in a reduction of the downward extension of the construction including a clamping handle (54) which preferably extends under the column tube. <IMAGE>
