Abstract (en)

[origin: EP0794101A2] Simultaneously, the geometrically required cross movement (12) and longitudinal movement (13) of the wheel sets (3-8) during track curve travel in relation to the vehicle bodywork are passively or actively adjustable by means of kinematics (3). All wheel sets during track curve travel are controllable in a radial or virtually radial position. Passive radial control pins are provided at both ends of the wheel set axles, which slide in guide grooves connected to the bodywork (2) of the vehicle.
