Abstract (en)
[origin: EP0794394A2] The two throughflow U-shaped channels each have two floor-side pipe connections (15) and a connecting channel branching from them, together with heat body-side pipe connections (18). The fitting (1) comprises two part fittings (10,11), each of which has a throughflow channel, a connecting channel and the corresp. pipe connections. On the side walls of at least one part fitting are raised formations (22,22') which correspond with the side walls of the other part fitting. A connecting component (23) connects the two part fittings selectively in one of two identical positions.
