Abstract (en)

[origin: WO9616752A1] The present invention relates to the runout table between the last mill stand (1) and a wind-up reel (2) for a rolled strip (4) in a hot rolling mill, wherein the runout table, counting from the last mill stand, is divided into a transport zone (3), a cooling zone (6), and a final zone (7), wherein the strip along the runout table has a first propulsion device comprising the transport zone and consisting of a roll table with rollers (5) with driving motors of their own, and a second propulsion device comprising the whole or parts of the cooling zone and the final zone and consisting of a linear motor with a stator (8), and wherein the strip constitutes the movable part of the linear motor.
