Abstract (en)
[origin: WO9616817A1] Disclosed is a stamping device with upper-strike inking. It comprises a housing (3) which accommodates an ink cushion (4) and has two side elements within which a stamp insert (5) is guided. The stamp insert can be reversibly displaced by an actuating element (8) which encloses the housing from a position in which it picks up ink from the ink cushion via a turning mechanism to the printing position; the actuating element is spring-loaded by a pressure spring (9) against the housing and forced into the ink pick-up position of the stamp insert, the stamp housing being connected to a flat base (13) which extends at right angles to the housing and is provided with a central through-aperture for the stamp insert and a recess on its lower face which accommodates a stamp plate and surrounds the through-aperture.
