Abstract (en)  
[origin: WO9617025A1] The invention relates to a conductive ink material comprising a vehicle/binder system containing a metallic pigment; the inventive conductive ink material applicable in small application filmweights but presenting a high conductivity and showing a fast drying speed is characterized in that the vehicle/binder system is a water base binder system having an application viscosity of less than 1000 cps (mPa.s) preferably of less than 500 cps (mPa.s) and that the pigment is a precious metal pigment or comprises at least a precious metal coating.
