Abstract (en)

[origin: DE19531951C1] To improve a high-frequency switching distributor by giving it the simplest possible structure and absence of transpositions, the switching distributor has at least two distributor circuits arranged on at least one circuit board, each of the two distributor circuits is arranged in one of at least two superimposed planes, each of the distributor circuits has a first terminal, a line connected to the first terminal, a branching circuit branching into N branch lines with a switch in each of the N branch lines, and N second terminals, and each of the N second terminals of one distributor circuit is connected to one of the N second terminals of the other distributor circuit.
