Abstract (en)

[origin: WO9617430A1] Electrostatic motor and its fabrication process, said electric motor comprising a fixed part (200, 204, 206, 208) called stator with an elastically deformable membrane (208) and a movable part (230) called rotor and arranged on the membrane (208) and moved by means of deformation waves from the elastic membrane, said electric motor being characterized in that it is provided with electrostatic means (204, 205) for deforming the membrane (208).
