Abstract (en)
[origin: EP0795282A1] The case has two top overlapping sections (2, 3), and a grip (4) on one section passes through an aperture (6) in the other section. The closure has two closure elements (7, 8) with bolts (9, 10) on the outer section (2). Each bolt projects into the aperture, and engages into a bolt holder on the inner section. When in locking position, the bolts engage into undercuts, which are formed by the front grip ends (13) of the bearing arms (14) of the carrier grip. The bolts are pivoted into position via turnable toggles (11, 12). The closure also has centring elements to centre the carrier grip within the aperture.
