Abstract (en)

[origin: EP0795283A1] The hair remover comprises a hand held casing (1) containing hair removal tweezers on roller (3). A vibrating piece (10) is caused to have a periodic to and fro movement by a shaft (12), balance weight (13) and springs (15-17). The drives for the hair remover and the vibrating pieces are activated simultaneously. The roller, with an axis (18), is carried by the casing and extends through a casing opening (19). It is applied against the surface from which hair is to be removed.
