Abstract (en)

[origin: EP0795424A1] The appts. to apply markings to a mineral fibre material has a plate-shaped stamping block (12) with heaters (14). The stamping block (12) is moved at right angles to the moving mineral fibre material, and moves partially with the movement of the material. Also claimed is an operation where the mineral fibre material travels under the stamping block and heaters. The block is moved down against the material, travels with it temporarily, and is then lifted clear for the cycle to be repeated.
