Abstract (en)

[origin: EP0795464A1] The ship's deck's floor (4) has at least one inflatable bag (40,48). This bag is stabilised against tipping or being pressed away by devices (20) on the above water and or underwater side. It is connected to the ship's walls (6) via flanges (50). Preferably, several packing cases stand in a row with the bags on the floor. When the bags are inflated through the flange, they connect together so as to be watertight. The cases lie low, are fixed to the floor and have approach ramps (46).
