Abstract (en)
[origin: EP0795663A1] The slide piece (4) is movable by a key bit or closing cylinder closure lug. The slide piece has a slot for a pin on the bolt and is held in a clamped position by a locking piece in the form of a catch (26) and catch-lug (27). The slide piece is parallel to the inverted plate (3) and is movably guided in at least two spaced-apart guides. There is a spring arrangement (36) for returning the slide piece, positioned between the slide piece and the main plate (2). When the bolt is completely returned, and the spring arrangement tensioned, a lug grips behind a catch on the spring-loaded locking lever (6). A release lever (7) corresponds to the locking lever.
