Abstract (en)
[origin: EP0795664A2] The slider has a slot running at an angle of approximately 45 degrees to the cover for the engagement of a pin arranged on a bolt. The slider is tensioned by a key ward or a closure cylinder closure nose formation on a bolt back closure and held by a stop in the tensioned position. The stop is released by the key ward or the closure cylinder closure nose formation (11). The stop comprises a securing cam (12) on the slider and a stay arranged on a spring-loaded stop lever (6). On a pin (8) of the bolt (5) is a change lower part (14) operable from the key ward or the closure cylinder closure nose formation.
