Abstract (en)

[origin: EP0795669A1] The bolt (20) can be moved in the longitudinal direction of the rabbet by a two-sectioned guide mechanism (23) which has a control arm (29) swivelling out at right angles to the plane of the door panel. The arm is linked to the baseplate (7) of the rabbet groove guiding the bolt in a guide shaft (16). A longitudinal ridge (8) extends the full length of the back of the baseplate. The broad freely outward-pointing side of the bolt runs along the C-sectioned guide shaft. The longitudinal ridge is positioned in the middle of the side of the baseplate, and has fixture openings (9-11).
