Abstract (en)

The disclosure relates to a light control covering device for an architectural opening comprising a control means (7, 21, 37) and a flexible sheet (1), the control means enabling different translucency positions of the flexible sheet, wherein the flexible sheet (1) is of a stretchable nature and in that the control means (7, 21, 37) are adapted to arrange for at least a first position of the flexible sheet (3), in which position the flexible sheet is mainly unstretched, and a second position of the flexible sheet (3), in which position the flexible sheet is substantially stretched. <IMAGE>
