Abstract (en)  
[origin: EP0795684A1] A marine outboard engine (1) has an engine unit (10) being vertically arranged with respect to a driving direction of a boat (8). The engine unit (10) comprises a cylinder block (15) having at least one cylinder (37), and a cylinder head (14) connected to said cylinder block (15) and defining at least one combustion chamber. This cylinder block (15) further comprises an exhaust passage (36) for collecting exhaust gases from the combustion chamber and for expelling said exhaust gases downward beneath the engine unit (10). The marine outboard engine (1) further has a cooling structure for cooling said at least one cylinder (37) and said at least one combustion chamber by means of a fresh coolant water. Thereby, said coolant water first is directed to the exhaust passage (36) for firstly cooling said exhaust passage (36) and then is directed to said at least one cylinder (37) and respective combustion chamber. <IMAGE>
