Abstract (en)

[origin: EP0795989A2] A tone or tones are generated in a base station at a volume level where one assumes that the telephone user of the mobile device holds the device far enough away from his ear so that no negative influences appear. This usually occurs when the user is not himself making a telephone call or attempting to make a connection to another subscriber. The mobile device has several operating states, including "level 3", "active", "overlap sending", "call delivered", "call proceeding", or "call initiated". The wireless telecommunication system is a cordless system.
