Abstract (en)

[origin: WO9617525A1] A physiologically-acceptable formulation comprising two or more of: (a) an obligate anaerobe capable of converting lactic acid; (b) a facultative anaerobe; and (c) one or more enzymes capable of degrading starch or fibre to assimilable material. These components are useful to prevent or inhibit acidosis, especially in ruminants, and can thus promote weight gain or milk production.
